Homework \#4

## I worked with:

## I consulted:

\#1. M is the Turing machine:

| $\delta$ | B | a | b | c |
| :--- | :--- | :--- | :--- | :--- |
| $\mathrm{q}_{0}$ | $\mathrm{q}_{1}, \mathrm{~B}, \mathrm{R}$ |  |  |  |
| $\mathrm{q}_{1}$ | $\mathrm{q}_{2}, \mathrm{~B}, \mathrm{~L}$ | $\mathrm{q}_{1}, \mathrm{a}, \mathrm{R}$ | $\mathrm{q}_{1}, \mathrm{c}, \mathrm{R}$ | $\mathrm{q}_{1}, \mathrm{c}, \mathrm{R}$ |
| $\mathrm{q}_{2}$ |  | $\mathrm{q}_{2}, \mathrm{c}, \mathrm{L}$ |  | $\mathrm{q}_{2}, \mathrm{~b}, \mathrm{~L}$ |

a) Trace the computation of $a a b c a$
b) Trace the computation of $b c b c$
c) Draw the graph for M
d) What does M do?
\#2. Construct a Turing machine with alphabet $\{a, b\}$ to compute $f(n)=2 n+3$. Represent numbers in unary notation; that is, 0 is represented by a 1 on the tape, 1 by 11,2 by 111. (So if $\mathrm{n}=3$, you would be left with 101 's on the tape etc.). Have your Turing machine halt in the configuration: $q_{f} B f(n) B$.
3. Create a Turing machine to accept the language: $a(a \cup b) * b$
\#4. Given the following Turing machine,

a) What is $L(M)$
b) Show $\mathrm{R}(\mathrm{M})$ using the encodings of Section 11.5 (discussed in class)
\#5. Construct a Turing machine in words (i.e, describe its moves without actually writing all the transitions) that determines whether a string over $\{0,1\}$ is the encoding of a Turing machine.
